

## CodeFlow Übung lev1\_9: concat

### Aufgabenstellung:

Verwende die Methode concat(), um die gewünschten Zeichenketten zu erhalten.

```
const text1 = "Sam is going to codingschool";  
const text2 = "Susi"  
const text3 = "and"
```

- Erzeuge mit "concat" diese Ausgabe in einem HTML-Dokument. Nutze alle Methoden, die du bereits gelernt hast.
  - Sam is going to school and to the movie theater
  - Sam is going to movie theater
  - Susi and Sam are going to school
  - Susi and Sam are going to gym and to the movie theater
  - Susi is going to school and to the movie theater
- Speichere jedes Ergebnis in einer Variablen und verwende `document.write(myVar+"<br>")`, um das Ergebnis anzuzeigen.

# Vorschau:

Sam is going to school and to the movie theater

Sam is going to movie theater

Susi and Sam are going to school

Susi and Sam are going to gym and to the movie theater

Susi is going to school and to the movie theater
